

SECOND FERRMED – EU CORE NET CITIES TRIBUNE MÁLAGA, 13th April 2016

THE DEVELOPMENT OF THE FERRMED GREAT RAILWAY AXIS (SOUTH SECTOR) AND THE RISE OF A WESTERN MEDITERRANEAN NEW CORE AREA

“Evaluating the challenges and opportunities of the intersection of the Euler and Mediterranean global growth vectors”.

AUDITORIO DEL MUSEO RUSO DE SAN PETERSBURGO
Avenida Sor Teresa Prat, nº 15
Edificio de Tabacalera
29003 Málaga

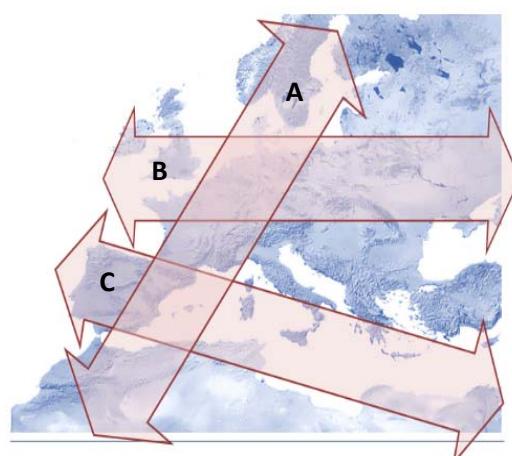

OVERVIEW

The EU and neighbouring countries are moving towards a new socio-economic model following the three emerging global growth vectors:

- A) European Union Locomotive Economic Regions (EULER) Vector
- B) Eurasian Vector
- C) Far-East/South Asia – Mediterranean Vector

The increase in competitiveness is mainly oriented towards these emerging vectors, particularly in the intersection areas.

The Far-East/South Asia-Mediterranean Vector includes the route in the world with the most “critical mass”. More than 60% of the world population is connected to this itinerary that overflows to the Pacific and Atlantic basins.

The Euler Vector has direct or close impact on over 54% of EU population and 66% of the GDP. In addition the Vector has a great influence over more than 70 million inhabitants in North Africa.

The intersection of these two global growth vectors occurs in the Western Mediterranean Basin.

The opportunities for economic development of this Intersection Area are enormous.

Regrettably the railway transportation network in this Area has significant limitations and bottlenecks like the length of the freight trains (Italy and Spain) the width of the tracks (Spain), infrastructure development in France (Contournement Est de Lyon, the new Montpellier – Perpignan line, the new Lyon – Turín link), in Spain (adaptation and capacity increase of existing lines in the Mediterranean Corridor to international width, new lines between Tarragona and Valencia, Murcia and Almeria, Almeria – Málaga – Algeciras and others) and in Maghreb (refurbishment of existing lines and new lines (Trans-Maghreb line and penetration lines from Mediterranean to Continental Africa)).

Worldwide population geographical distribution

This situation causes the railway's share of land transportation to be very low in that zone and, as a consequence, overruns and negative environmental impact. Strong and coordinated actions to solve these limitations (including adequate links to intermodal terminals and ports) are urgently required.

Furthermore, stable short sea shipping routes are necessary in order to convey the increasing trade flows in this area.

Evaluation of potential economic growth and the corresponding impact on the trade and transportation network in the Western Mediterranean, is a must for the UfM's consolidation.

Key experts from the EU and North African countries will examine these matters in depth at the Conference, presenting corresponding proposals and recommendations to the Administrations involved.

We kindly invite you to participate in this innovative, high level Conference. The registration and all the services during the Tribune (including the shuttle and lunch) are free of charges.
